PROFESSIONAL EXPERIENCE

Optum | Application Developer II | Bothell, WA

2015 - 2017

Optum is a health services and innovation company under UnitedHealth Group. Analyzed business requirements and functional designs to lead Javascript code design and development.

- Coached and mentored less experienced developers to learn AngularJS 1.X and resolve UI issues, optimizing effective teamwork to complete work.
- Collaborated with product, business, UI/UX, QA, and other developers under Agile processes, to deliver high quality applications, exceeding user expectations to production.
- Ensured company coding standards through code scans, code reviews, and unit tests, strengthening quality and functionality of business-critical applications.

CashVue | Front End Web Developer Intern | Seattle, WA

2015 - 2015

CashVue is a startup developing cloud accounting software for businesses. Independently learned the Angular 1.X framework to develop a dynamic application for financial data.

- Developed a responsive administrative user settings page to be use for version 1.0 of CashVue's MVP, which resulted in an interactive list to edit, add, and delete users.
- Utilized open sourced projects for added features, such as tables, graphs, and toolkits, to leverage UI functionality.

Sno-King Junior Golf | Web Developer | Seattle WA

2014 - 2015

Designed web development project to manage and share golf materials between the coach and players.

- Leveraged Wordpress for content and user management, further enhancing features.
- Developed a customized Wordpress theme based on UI mockups to achieve a pixel perfect UI.

RELATED PROJECTS

Plan My Date | INFO 320: Information Needs, Searching, and Presentation | University of Washington, Information School, Seattle, WA

An individual project to create a search web application to plan date ideas, such as food and events.

- Achieved 1st in INFO 320 course competition for search applications.
- Designed a flat UI, allowing for flexible and faceted searching.
- Leveraged Google Places API and Eventful API to suggest date ideas.

Building Search / Web Infrastructure | INFO 344: Web Tools and Development | University of Washington, Information School, Seattle, WA

A back-end web development course individual project to understand information architecture.

- Designed a quick suggestive search UI and programmed a web crawler with admin interface.
- Utilized Amazon Web Services and MS Azure to store search results data.

EDUCATION

B.S. Informatics: Information Architecture and Human-Computer Interaction, Minor in Mathematics
University of Washington, Information School, Seattle, WA
